

Animal life cycles

Grade 2 Science Worksheet

Match the pictures with the descriptions of each stage of the kangaroo's life.

Mammals always look like smaller versions of their parents.

While in the pouch, it latches onto its mother and safely grows for the next 7 to 9 months.

Kangaroos are two years old when they become adults.

It begins to come out of the pouch and will use its long tail to help balance.

The new-born is blind, hairless and so small.

Answers

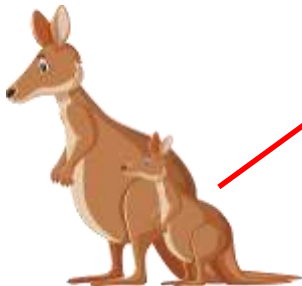

While in the pouch, it latches onto its mother's teat and safely grow for the next 7 to 9 months.

Kangaroos are two years old when they become adults.

It begins to come out of the pouch and will use its long tail to help balance.

The new-born is blind, hairless and small.
